

Managed Equipment Services

Overview

We can help to:

- Use the experience of Covid-19 of extensive equipment relocation
- Provide resources to improve equipment management processes
- Audit and manage equipment in a clear and transparent manner

Common Challenges

Have we got the right kit?
Is it in the Right Place?
Is it usable?

1. Equipment has been moved in haste to free up a location and its new location is not documented
2. Equipment servicing is impossible to undertake if the item has been lost – leaving a potential risk if it is being used in the field
3. Equipment is still being

used at a remote location and additional equipment is required in order to restart work

4. Equipment has been damaged during any temporary relocation

Our Services

Areas of support

We will support in you in making sure that any equipment that you need is available when you need it.

During the crisis and in the recovery period there has been an increase in the number of requests for certain items. We are also aware that existing hardware may have been relocated.

To support you we will be checking the status of items and helping to ensure that they are in the correct

locations for your work to commence

How can we help you

JJML can provide the resources and support to work with you in order to audit the equipment required by the hospital and ensure that it is available and serviceable for immediate use

We will take a sample plan of the items in the field and check against our records that they are located where they should be.

Our teams are available for you to contact if you are aware that:

- Something is missing
- Something is damaged
- Additional equipment is required

At the end of the loan period, or period of displacement,

JJML will retrieve the items or help to relocate them to where they are needed.
