

Shoulder ODEP Ratings

The Orthopaedic Data Evaluation Panel, ODEP, was set up in 2002 for manufacturers to use in order to gain ratings for their hip, knee and shoulder prostheses. These ratings are benchmarked against agreed standards and updated at regular timepoints.

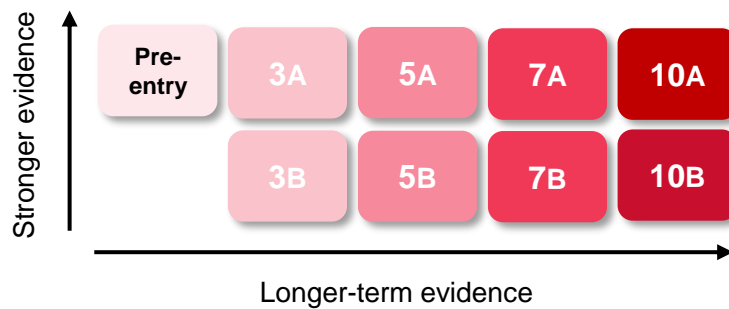

An ODEP rating consists of a number and letter indicating the years' worth of evidence and the quality of that evidence.

More information on ODEP ratings can be found on their website: <http://www.odep.org.uk>
