

## eSIMS

eSIMS Advanced Inventory Management Solution system is designed to aid in the management and ordering of *DePuy Synthes Companies* inventory by utilizing the barcodes printed on sterile and non-sterile product packaging.

- eSIMS facilitates better procurement and efficient inventory management
- eSIMS accurately analyzes 'real-time' stock levels (PAR levels) ordering stock automatically
- The technology can be configured to standardize orders and ultimately reduce the frequency and associated costs of procuring orthopaedic inventory
- The system is easy to use, with the ability to customize the software to meet the needs of the user
- eSIMS is compatible with hospital systems, communicating securely and directly with *DePuy Synthes Companies*

## eSIMS ADVANCED INVENTORY MANAGEMENT SOLUTION

eSIMS, our Electronic Inventory Management Solution provides hospitals with real-time visibility of their inventory through virtually all stages of implant preoperative lifecycle by employing barcode scanning technology.

At any given moment the customer can see, in real time, the inventory level in stock, product turn rates, and where a product is stored. eSIMS is designed to provide benefits such as:

### Software Solutions:

- Barcode scanning facilitating accurate and efficient inventory management
- Software that can interface with the hospital ERP system, communicating securely and directly with *DePuy Synthes Companies*
- eSIMS can be configured to standardize orders, reducing the frequency and costs associated with inventory management

### Purchasing:

- Real time access to pricing, product portfolio updates and transaction history
- Helps facilitate better procurement and efficient inventory management

### Inventory Management:

- Accurate control and management of inventory and product consumption
- eSIMS can be configured to re-order automatically
- Accurately track LOT numbers and product expiry dates
- eSIMS establishes Standardized OR Inventory ordering templates for orthopaedic consumption

## eSIMS EFFICIENT AND SECURE STORAGE SOLUTION

Cabinets are an important component of *DePuy Synthes Companies* Inventory Management solution. The cabinets can be utilized with the eSIMS software, or as a standalone storage solution, providing the user with the ability to:

- Hold inventory in one storage solution, helping to ensure product(s) are located accurately and timely
- Customize storage for sterile and non-sterile products
- Help reduce misplacement or damage to the products
- Help prevent unauthorized access
- Help to improve OR efficiency by preventing delays to surgery 'start times'

Orthopaedics, Trauma and Spinal Surgery

## eSIMS IMPROVING HOSPITAL EFFICIENCY

The eSIMS software is designed to improve efficiencies and help optimize the supply chain by greatly reducing time, costs, resources, and errors throughout the inventory management and procurement process, helping to create the 'perfect order'.

- Product ordering is electronic and can be automated, helping to ensure on time delivery of the right product and the right quantities
- eSIMS technology helps to ensure approved orders go directly to *DePuy Synthes Companies*
- Approved orders can be tracked and amended as required
- Real-time analysis of product consumption reduces the risk of out of stock items
- Sterile and non-sterile orders can be held within secure eSIMS storage cabinets
- eSIMS reporting function helps eliminate variation and waste, helping to ensure efficient inventory management

*“eSIMS has greatly improved the efficiency of our department. At any moment in time we know the exact quantity and value of our implant stock.”*

*-Justine Hargreaves*
