CODMAN VersaTru™ Disposable Bipolar Forceps

CODMAN VersaTru™ Disposable Bipolar Forceps are available in Standard and Slim, offering 15 configurations to cover a range of surgical procedures.

- Proprietary non-stick plating for precise coagulation
- Optimal weight, balance and spring force control
- The bayonet handle, thin tines and beveled tips are designed for excellent visualization of the surgical target
CODMAN VersaTru™ Disposable Bipolar Forceps

CODMAN VersaTru Disposable Non-Stick Bipolar Forceps

Single-use, sterile forceps designed for non-stick performance that deliver continuous coagulation when you need it most. Together with refined ergonomics and sleek bayonet design, these forceps enhance performance during procedures.

CODMAN VersaTru Slim Disposable Non-Stick Bipolar Forceps offer a slimmer profile, thin tines and beveled tips for excellent visualization of deep surgical targets.
ISOcool™ Bipolar Forceps

With a reusable handle and sterile, single-use gold tips, ISOcool™ Bipolar Forceps are designed for procedures requiring precise temperature control. In most delicate procedures, there is no room for error - instrumentation must be of the highest quality.

ISOcool Bipolar Forceps don’t compromise. By incorporating the Active Heat Transfer Technology along with our gold plated tips, surgeons now have an instrument that enhances their ability to coagulate delicate tissue with minimal collateral tissue damage*.

The Science Behind Non-Stick Forceps

Active Heat Transfer Technology

How It Works: Fluid inside the vacuum tube vaporizes as it transfers heat from the tips of the forceps. Heated vapors move up the tube, through the wicking structure. Vapors condense, releasing heat away from the surgical site. Condensation returns the fluid to begin the cycle again. Without AHT® Technology, temperature at the tips of the forceps can exceed the temperature necessary for tissue coagulation.

For more information, contact your Codman Neuro Sales Representative. For product information, call (800) 225-0460. www.depuysynthes.com

Note: All dimensions are approximate.
Codman Neuro provides a broad portfolio of reusable forceps sizes and types, including irrigating or non-irrigating, stainless steel or titanium, insulated or non-insulated. They provide bipolar cutting and coagulating capabilities for a wide range of neurosurgical procedures.

**CODMAN Reusable Non-Stick Bipolar Forceps**

- Irrigating forceps have an irrigation pipe that is recessed into the right blade of the forceps, increasing visibility at the forceps tips.
- Bayonet style enhances visibility by keeping the surgeon’s hand farther from the line of sight.
- Insulated forceps shaft protects surrounding tissue when performing deep procedures.
- A variety of handle lengths and tip patterns provide a comprehensive system for bipolar coagulation and cutting technologies.

#### ACCESSORIES

**Code #** 801130  **Description**

Stylets – set of 10/replacements for preventive maintenance and care of the microtube on Rhoton Bipolar Irrigation Forceps.

Irrigation Stylets are approximately 11” in length.
**Rhoton Non-Stick Mirror Finish Bipolar Forceps**

The Rhoton Forceps have more than 20 patterns of irrigating and non-irrigating options. The advantages of the Rhoton Non-Stick Mirror Finish Bipolar Forceps include:

- Reduced tissue charring and sticking to the forceps.
- Improved visibility.
- Exact amount of irrigation delivered—no flooding of field or dry tissue from too much or too little irrigation.
- Surrounding brain tissue remains cooler.
