Kirschner Wire Implant Module

Features

- Various-sized wires (1.0 mm, 1.25 mm, 1.6 mm and 2.0 mm diameters) for wide range of applications
- Multiple tip configurations for broad range of indications
- Metric to English diameter gauges for easy conversion and size identification
- Color-coded protective caps for size identification (autoclavable)
- Module size enables the entire set to be sterilized in a small office autoclave
- K-Wires made from implant quality 316L stainless steel

Various sizes and tip configurations

Graphic case can accommodate as many as 20 K-Wires per pocket

Metric to English Diameter Gauges

Protective caps can be sterilized with module

Color-coded to distinguish size (red = 1.6 mm, blue = 2.0 mm)

Ease of removal
